Description: Sensory Analysis Development Internship

Do you also believe in a future where both man and nature can thrive together? Where we can feed ourselves without depleting nature? Then you are the perfect match to join us in accelerating the transition to a food system in balance with nature. We are looking for a talented student who want to contribute in this 'ento-revolution'.

About Protix

Protix is a global leader in production of quality insect ingredients for petfood and animal feed applications. In addition to manufacturing ingredients aligned with quality and safety certifications (such as GMP+), Protix takes additional steps to ensure that our products consistently have the sensory characteristics that are important for our customers.

Job description

Protix is seeking a bachelor's or master's student for a thesis project or internship to work with our quality assurance and product development teams to expand our sensory quality control systems. Sensory evaluation is a scientific discipline that analyses and measures human responses to the quality of food products, e.g. appearance, touch, odour, texture, temperature and taste.

Internship objectives

- Study the product quality characteristics.
- Identify sensory parameters.
- Define these parameters and setting critical limits.
- Developing sensory analysis strategy (and required documentation).
- Finally, successfully implement the improved system.

Education qualifications/requirements

- Bachelor's or master's degree student in food/feed technology (or related field).
- Available for 40 hours/week for at least 4 to 6 months (from 1 September or later).
- The internship is based at the production site located at Dongen, Netherlands. The intern will travel to this location on daily basis using public/self-transportation.
- Excellent knowledge of English. Knowledge of Dutch could be an asset.

Compensation

- This is an unpaid internship.
- Travel reimbursements will be provided according to company policy.
